Rainwater Collection

Rainwater is a valuable natural resource that can be collected as an environmentally responsible way to provide alternatives to water consumption to any home. 3% of water used is consumed. The rest is used around the home in different ways.

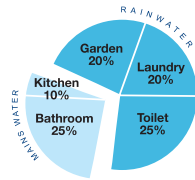

We believe it makes good sense to catch pure, fresh rainwater that falls for free from the sky. We have a complete range of products and advice for your rain harvesting needs.

Rainwater can supply up to 65% of your households water. You can use it for:

- Watering the garden and lawn
- Washing vehicles
- Supplying the laundry and toilet
- Topping up spas and swimming pools
- Water blasting the property

How much rainwater can a typical household use?

Approximately 65% of household water needs can be met by collecting rainwater.

Rain Tank Capacity (in litres)

Average water use in litres/day	200	1,000	3,000	4,500	9,500
	125	0%	80%	95%	100%
	225	0%	65%	85%	100%
	325	5%	50%	70%	90%

Average yearly % of water supplied (for 150m2 roof area)

Urban Dwelling Tanks

Urban Dwelling Slimline Rainwater Tanks

The WaterShed has a selection of urban rainwater tanks in various styles and sizes to suit urban dwellings. The Slimline tank is aesthetically pleasing and blends well with traditional, contemporary and ultra modern settings.

110 Litre

210 Litre

Urban Dwelling Barrel Rainwater Tanks

A wide range of sizes and shapes are available. A simple spouting downpipe adaption kit is available to collect your rainwater into your harvesting tank. A small pump can then be added for running a sprinkler or garden hose.

Rainwater Accessories

First Flush & Leaf Diverters

Rain Filters - Pre Tank

Floating Foot Valve

Tank Level Indicator

Submersible Pumps

Pressure Pumps

Rainsaver

Collect it. Pump it. Filter it!

We have a wide range of rainwater accessories to complement and enhance any rainwater system.

Leaf & First Flush Diverters

First flush water diverters capture the first and most contaminated rainwater from the roof & gutters, automatically diverting the subsequent cleaner rainwater to the water tank. A critical component for every rainwater harvesting system

Pre-Tank Aqua Filter

A simple yet very effective way of filtering rainwater before it gets into your tank. Removes most solids and reduces sediment and organic material

Floating Foot Valve

The float keeps the suction inlet to the pump near the surface in the highly oxygenated fresh water zone. It adjusts continually to the changing water level. Fits all types and sizes of tanks for better tasting and healthier water.

Tank Level Indicator

Indicates water level of tank

Submersible Pump

The house pump is plumbed inside the water tank allowing for quiet operation. No room is required outside the tank for the pump. Very reliable.

Pressure Pumps

We have an extensive range of pressure pumps suitable for the home, farm and business.

Rainsaver

Ideal for urban dwellings. Use what rainwater you have collected first, then automatically switch back on to municipal water supply, once your rainwater has been used up.
